## An Overview of the Process for the Bozeman Infant/Toddler Evaluation Clinic (IEC)

- 1. Referral to Child Development Center (CDC) 1-800-914-4779.** A referral can be from anyone on behalf of a child ages 0 to 3 suspected with delays in development (parental permission for referral required). When calling with a referral, simply say, "I'd like to make a referral to the Bozeman Infant/Toddler Evaluation Clinic". Please have demographic information available at the time of the referral.
- 2. Scheduling a Child for an Evaluation.** CDC's administrative assistant will contact the family to schedule an appointment (clinics are held 7 months out of the year excluding summer).
- 3. Information Gathering.** CDC's Administrative Assistant will send consent forms and request for information forms out as necessary. Copies of discharge summaries from the hospital for infants will be pursued.
- 4. Clinic Attendance.** Clinic attendees will see a team comprised of a nurse, cognitive specialist, speech therapist (who will also screen hearing), motor therapist, and family support specialist. The *Bayley Scales of Infant Development-3rd Edition* will be completed on most attendees, contingent on the reason for referral. Children are generally seen at 4-6 months of age, then 12, 18, 24 or 30 months of age.
- 5. Eligibility.** Any infant/toddler can be referred to the Infant Evaluation Clinic if a health care provider feels he/she is in need of developmental follow along. However, please refer to the back of this page for more specific referral guidelines.
- 6. Recommendations.** All children seen at the clinic will have a written summary report outlining the results of the evaluation and recommendations and referral options to discuss with their primary health care provider. Recall to subsequent clinics may or may not be suggested.

*Helping children with developmental delays reach their potential*
